Resume

Bharath T, Senior Data Engineer

Iowa bharatht@bu.com | 641-230-XXXX

PROFESSIONAL SUMMARY

Senior Data Engineer with experience in designing, modernizing, and migrating enterprise data platforms across on-premises and Azure cloud environments. Proven expertise in architecting and deploying Azure-based Lakehouse solutions on Databricks, including Unity Catalog–driven governance, while modernizing complex legacy platforms such as IBM MDM and IBM InfoSphere Information Server. Strong background in scalable data pipelines, cloud data engineering, SQL, Python, and ETL/ELT frameworks, with a consistent focus on improving data quality, security, reliability, and analytics readiness. Demonstrated ability to define enterprise data strategy, reference architectures, and engineering best practices while partnering with stakeholders and cross-functional teams to translate business objectives into cloud-first, production-grade data and AI solutions. Promoted DevOps Best practices, including CI/CD and data observability.

- Architectural Oversight for Advanced analytics ensured the robustness of the medallion architecture within Vermeer analytics stack, integrating Azure, Databricks, Synapse, and PySpark to optimize data flows and analytical processes.
- Architected scalable ML pipelines on Databricks using Delta Lake and PySpark, integrating MLflow for lifecycle management, Auto Flow for automated model development, and Roboflow to support production-grade computer vision and advanced analytics on Azure.
- Architected and deployed enterprise-grade Azure Databricks platform from the ground up at Vermeer, integrating Unity Catalog governance and medallion architecture to support real-time telemetry ingestion, advanced analytics, and operational reporting. Developed best practices for platform setup, security, and data management, enabling seamless integration with existing systems and empowering advanced analytics and machine learning initiatives.
- Designed and developed integration solutions to streamline data ingestion and transfer, facilitating seamless connectivity between on-premises to on-premises systems as well as on-premises to Azure cloud environments. Leveraged robust ETL/ELT frameworks and modern data integration tools to ensure efficient, secure, and reliable movement of large-scale datasets, supporting both legacy modernization and cloud migration initiatives.
- Led the architecture of an enterprise AI analytics data platform for connected-machine telemetry, integrating Genie AI agents and Microsoft Copilot via Azure AI Foundry to democratize data access, enable conversational insights, and operationalize AI across analytics and decision workflows.
- Built scalable processing pipelines for unstructured RADAR and vision data, supporting feature engineering, model training, and advanced analytics across high-volume sensor workloads in a Lakehouse platform.
- Hands-on experience enabling data science and ML workloads on Databricks, including feature engineering with PySpark, large-scale dataset preparation on Delta Lake, production-ready ML pipelines, MLflow experiment tracking, and statistical analysis to support cloud-scale analytics on Azure.

- Drove enterprise ETL architecture and operations, designing highly scalable parallel processing solutions using DataStage Parallel Extender, managing 1000+ complex ETL jobs across production and non-production environments.
- Led platform administration, migrations, and upgrades, including large-scale DataStage version migrations, environment management, job automation, scheduling (AutoSys, Control-M), and production issue resolution.
- Partnered with business, analytics, and engineering teams to deliver reporting and analytics solutions using SSRS and Tableau, while mentoring teams and enforcing best practices across the SDLC.
- Designed and built enterprise ERP database replication using Quest SharePlex, enabling efficient redirection of direct database querying and supporting BI reporting needs. This solution improved data availability, minimized production system load, and ensured consistent, real-time data delivery for analytics and decision-making processes.

CORE SKILLS:

- Data Engineering: ETL / ELT Frameworks, Data Warehousing, Delta Lake Design & Optimization, On-Prem to Cloud Data Migration & Modernization, AI & ML Platform Enablement, Unity Catalog Governance, Metadata Management & Data Cataloging, Database Replication & Offloading Strategies, Technical Leadership & Mentorship
- Languages : C, C++, SQL, Java, Python, Scala
- Big Data : Spark, Hadoop, Kafka
- Cloud Platforms : Azure
- Databases : Oracle, MS SQL Server, Teradata, DB2, Transoft, Snowflake, SQL Server
- Orchestration : IBM DataStage, Azure Synapse Studio, Pentaho kettle, Talend
- DevOps & Tools: Git, CI/CD, Docker, Terraform
- Analytics : Power BI, Tableau
- Methodologies : Agile, Scrum
- MDM : IBM Initiate Master Data Service 10.x
- Address Verification: QAS US/CA Address verification software, Google Geo-Location Validator
- Data Quality : Quality Stage, Information analyzer, Data Manager
- Data Replication: IBM CDC, Quest Shareplex
- Database : Oracle, MS SQL Server, Teradata, db2 & Transoft
- Schedulers : Autosys, Control M, Crontab
- Utilities : TOAD, SQL Navigator, ISQLW, Smart FTP, VMWARE, MS Office
- Rational Tools : Clear Case, Clear quest, CVS, JIRA

WORK EXPERIENCE

- Working with Vermeer Corporation as a Senior Data Engineer/Architect from 2013 till date.
- Worked with State Street Bank and Trust as an ETL Developer.
- Worked with State Street Bank and Trust from Syntel Limited as an Analyst Programmer.

EDUCATION

- *Bachelor of Technology (B. Tech) in Electronics and Communications Engineering from JNTU, IND*
- *Currently pursuing MS in Computer Science and Artificial Intelligence from Boston University, USA*

CERTIFICATIONS

- *Azure Databricks Certified developer*
- *Databricks Lakehouse Platform Certified*
- *IBM DataStage Developer Certified*
- *IBM Advanced Quality Stage Developer Certified*
- *Kimball University ETL Architecture Certified*
- *IBM Master Data Management Certified*
